... Install with Adhesive	Can install with appropriate adhesive or standard mortar		✓

INSTALLATION

Be sure to check with local building codes regarding installation requirements in your area. Consult the fireplace manufacturer's installation instructions to ensure compliance with hearth extension requirements for the specific model of fireplace used in you application. Wood burning fireplaces require a noncombustible hearth extension.

Install 20"x20" hearthstones over a properly prepared surface onto a min 1/2" mortar setting bed. Install first Hearthstone in the desired location and level. Install adjacent Hearthstones leaving a 1/2" joint between pieces, align and level with the first piece. Using a grout, completely fill joints even with the top of the hearth surface and finish.

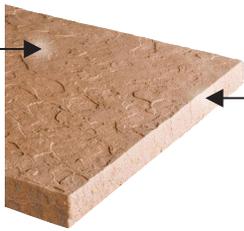

Note: 12"x60" Hearthstone Kit (use with gas or electric fireplaces) hearthstones may be tight fitted or installed with a mortar joint onto a 1/2" mortar bed or by using an appropriate adhesive.

Raised Hearth – Hearthstones should not extend more than 1 1/2" beyond direct support. When grouting the extended portion of a cantilevered Hearthstone, bring the grout to the front edge. **Tip** – Insert a long galvanized nail horizontally into the grout at the edge to add support. Cover the nail with mortar.

INSTALLATION – CONT...

20"x20" Etched Flagstone Texture

Consistent thickness enables perfect alignment of joints

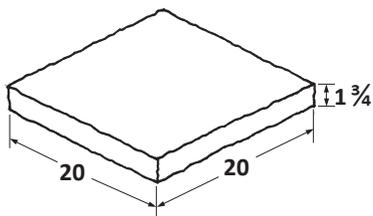

Level Hearthstones

Note: Hearthstones can be cut to desired width

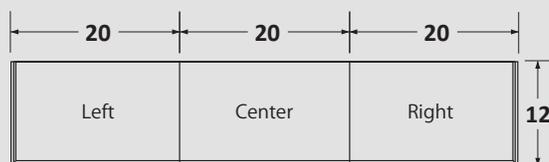

Sealing Hearthstones (if desired) – Sealing may assist in the removal of dust or stains should they occur. If you choose to use a sealer, make sure it is a silane based, breathable sealer. Note that sealers may darken the color of the stone. A test area is recommended.
